assembly and  
**TRAINING ROOMS**

For teams that engage in  
**COLLABORATION** and **LEARNING**

# maximize employee **INTERACTION**

Successful training environments hinge on having all participants in the room being part of the action . . . learning, interacting, and collaborating in ways that enrich them as individuals and support your organization's goals. To encourage such engagement, the space needs to be set up to capture the mode of active idea sharing. This means having chairs and tables configured in a way that includes everyone and gives them the space to feel comfortable enough to focus on the learning and collaboration taking place.

# KNOW YOUR AUDIENCE

*There are a number of design solutions to fit the particular training needs of a company. To maximize participation, consider the space available and the size of your audience.*

The common “classroom” layout has its advantages if the participants will be doing individual work or will work in pairs. This arrangement places training tables in rows with participants side by side and facing the presenter. Nesting tables allow you to change and rearrange the number of tables and their configurations to accommodate changing audience sizes and interactive needs. Simply fold, nest, and store any tables not needed.

# what are the **OPTICS?**

*Visual communication is key in impactful learning. Ensure your technology can support it.*

Having the right kind of visual display ensures everyone can see presentation materials and can engage and learn from the training content. An interactive display has the added benefit of encouraging collaborative learning. You can further enhance collaboration by adding video conferencing and content-sharing capabilities that support participants' bringing their own devices.

# YOU'RE ON A ROLL (literally!)

---

Modular components on casters allow for the most flexibility and quick and easy set-ups. Teams can reconfigure spaces to meet their needs in the moment with easy-to-move furniture that nests or stacks for quick storage. Locking caster options allow furniture to stay put once placed. Complementary storage options allow materials to be organized and readily available for participant use.

give comfort some  
**CONSIDERATION**

If your training needs require lengthy time frames in one seat, you'll need to provide ergonomically designed seating with superior comfort and supportive foam cushioning. Height adjustment features and swivel ability will further enhance comfortability for users of all shapes and sizes. In addition to the seating concerns, equip your space with flexible lighting to dim and illuminate as related to the technology you'll be using. Natural light can be great from external windows, but make sure glare is minimized as needed with the addition of functional blinds or other window coverings.
