ergonomics & **WELLNESS**

Products that support
HEALTH and **WELL-BEING**

boosting health **THROUGH DESIGN**

When office design is healthy for people, it's healthy for business. Statistics show that implementing proactive ergonomics into the workplace results in lower costs and boosted productivity. In order to take advantage of the many benefits of ergonomics and wellness in the workplace, it's important to take a holistic approach—considering not only the physical, but also the emotional, social, and mental health of individuals. Workspaces should certainly support the body and encourage a range of movement throughout the day to keep employee's focused and alert. But, considering design elements like color palettes, biophilia, and tactile elements like fabrics can also have a long-lasting effect on wellness.

A FIRST-RATE seating experience

With an ergonomic office chair, you can ensure comfort levels are perfectly set through highly adjustable features like seat-height, back-height, and arm mechanisms. Every body shape is different and adjustable options are key to the ideal individualized fit. It's also wise to introduce active seating, like perching stools, throughout the day to keep the body moving and muscles engaged.

ARMED WITH all the best options

Workday wellness goes beyond the desk and chair. It's time to take a hard look at the desktop. One vital solution in this tech-dependent world are monitor arms and stands. Monitor arms can help reduce neck, back, and eye strain and the pain associated with such discomfort. Being able to adjust a monitor's height, depth, and angle to the best position for your height and seating style makes a world of difference in an everyday work environment. Monitor arms and stands also free up the workspace to reduce clutter and increase efficiency and collaboration.

returning & READY

One key consideration to wellness in the office is creating spaces within open environments that employees are comfortable returning to.

In recent months, businesses everywhere are taking active steps to bring employees back to the office safely and confidently. One simple way to equip workstations for safe shared space is to add division. There are many different space division options available including screens that attach to existing desks and freestanding options to define and divide larger spaces into smaller work zones.

Contact our team at any time to discuss a wellness plan to meet your unique needs!
